SHORT BIO

I'm deeply interested in software engineering, machine learning and data science. In ten years, I see myself working as an ML Research Scientist, publishing research, and building next-generation AI systems that push the boundaries of what's machine possible. Recently, I've been diving deep into the architecture and implementation of deep neural networks, Transformers, LLMs, etc. When not coding, I love exploring the city of Boston and trying out new food.

EXPERIENCE

Founder, Web/Mobile Developer

Aug. 2021 – Dec. 2024

Beluga Tech

Kampala, UG

- Spearheaded the design and full-stack development of 10+ client-facing web / mobile applications
- Established and enforced coding standards, version control (Git), and agile development workflows across the agency, leading to a 40% reduction in post-deployment bugs
- Managed all aspects of agency operations, including client acquisition, contract negotiation, budgeting, and delivery

PROJECTS

GridZero (Build for STEM Expo '26) | *PyTorch, React/React Native, SQL, Docker* <https://grid-zero.co.za/>

Utilizing Eskom's historical telemetry to forecast South African national power outages.

- Architected a full-stack forecasting platform using Flask to serve live PyTorch model inferences via a REST API, with a React frontend for interactive risk visualization.
- Implemented secure OAuth 2.0 authentication to allow users to save personalized battery configurations and multiple location alerts.
- Visualized forecast data to display grid risk levels and confidence intervals
- Used Redis for asynchronous model inference and data scraping

EDUCATION

Massachusetts Bay Community College

Boston, MA

Associate of Science in Computer Science, Cum laude

Jan. 2025 – Dec. 2027 (Expected)

- Deep interest in Machine Learning & Computational theory;
- Recognized for outstanding academic performance and achieving top results; Inducted into Phi Theta Kappa Honor Society, Dean's List nominee for Spring 2025.

SKILLS

Languages: Java, Python, SQL

Frameworks: PyTorch, Next.js, React/React Native, Node.js

Dev Tools: Git, Docker

Libraries: pandas, NumPy, Matplotlib

Certifications: AWS Certified Cloud Practitioner

Languages: English (native), Spanish (limited working proficiency)
